Klaus Däßler, DIN

Editorial Changes of ISO-Prolog-DCG's Draft of 2010-07-18 w.r.t. Draft of 2010-04-01
(Due to Comments of Jonathan Hodgson and Uli Neumerkel)

3.2 included detailled reference to ISO Prolog Pt 1 and relationship of DTR to Pt1
   (Jonathan)

3.21 and 3.22 better wording for better understanding
   (Jonathan)

7.14.3   renamed push-back list by stake list. "context" seems me too weak. Stakes act in both directions, generating and parsing. (Ulrich)

7.14.6   included one example for the correlation of call/1 and call/3 (This example origins to Ulrich)

7.14.6   control constructs section: More detailed description of handling of control constructs
   (Ulrich)
   Remark: the handling of ->//2 and \+//1, '!'//0 and '{}'//1 must be clarified by the committee.

7.14.7 clarified the relationship between call//1, call/1 and call/3 (Ulrich)

8.1.1.3   Note on error handling relaxation in phrase/3 (Jonathan)

11   The normative impact of the reference implementation has been removed. The remaining reasons are:
   better understanding ;-)
   free material for new implementation

   The clash of predicate indicators in the reference implementation with existing ones in an implementation cannot be avoided by new committee defined names in the reference implementation. This must be solved by the user resp. implementer.

11   There is a separate ASCII form of the reference implementations and of the test cases.

Did nothing w.r.t. '|'. This must be decided resp. voted out by the commitee.

Pending decisions from editorial standpoint:

'|' //2
->//2
\+//2
'!' //0
'{ }'//1
